

OEM

a company that produces complex equipment
from components usually bought from other manufacturers

ODM

a company that has the capabilities to design,
develop, manufacture and sell products themselves.

BRAND

Consumers and Distributors can purchase directly
from CMDE's brand

Best Technology Development & Systematic Production System

CMDE KOREA is the company to produce and sell the cosmetics(including a beauty glue) that is made with its own technology based on systematic production.

We guarantee the quality of our products, which means CMDE KOREA is involved in all process of research, development, production, distribution, and marketing as a manufacturer and a distributor.

Based on our variety of products, we try to build up our brand power as making NUDYBEAUTY(Eyelash), NUDYCARE(Hair), NUDYBOND(Wig), and NUDYSUGAR(Waxing), and increase export of our products.

We promise to be CMDE KOREA that tries to produce the best quality of products all the time.

CMDE is specialized in manufacturing cosmetics product & chemicals.

(raw materials for cosmetics)

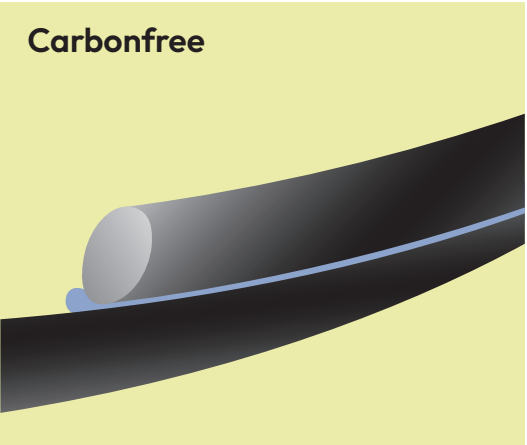

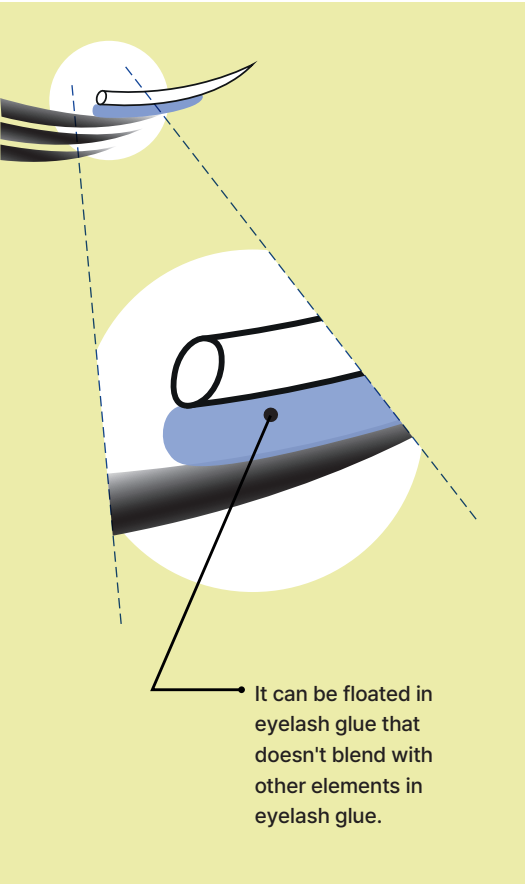

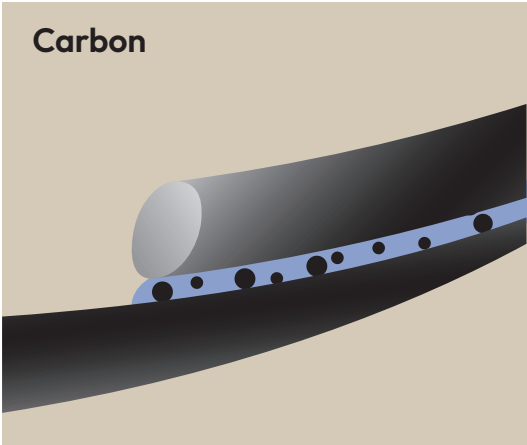

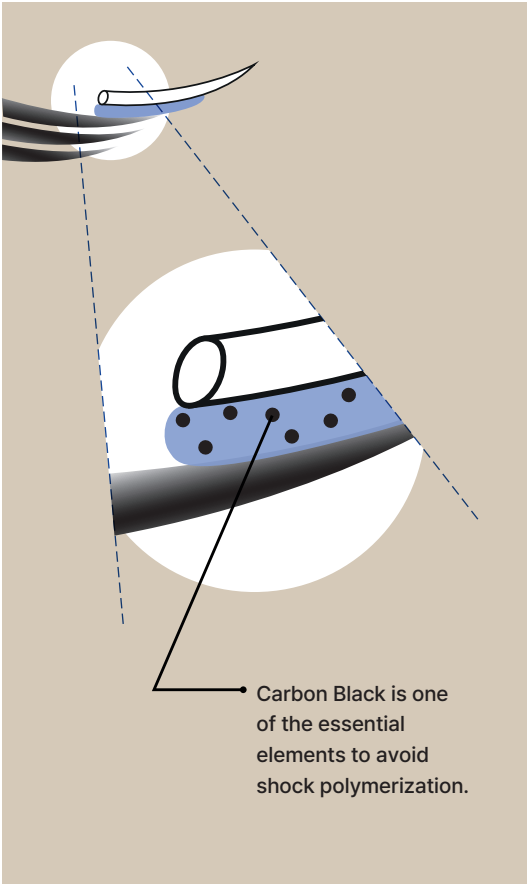

CMDE TECHNOLOGY

CMDE TECHNOLOGY

Carbon black Free glue for Eyelash Extension

CMDE KOREA is self-developing and producing our own glue without Carbon Black that is an essential element in eyelash extension glue. Carbon Black has been necessarily added to eyelash glue for whitening and the density of the glue. But Carbon Black is a kind of inorganic compound that can't be mixed with the base material in eyelash glue, so it is difficult to maintain the quality of the glue when it is divided into packages and also it always has to be used after being shaken.

Therefore, CMDE KOREA developed its own substance to improve whitening and the density of the glue. Our own creative glue has a strong point of mixing with the base compound of eyelash glue completely and retaining long-lasting eyelash extension. Carbon Black Free is also possible to control the drying time and to match colors freely as the name it self "Carbon Black Free" is. You can meet CARBON BLACK FREE GLUE only in CMDE KOREA, so enjoy the long-lasting effect of Carbon Black Free.

CMDE TECHNOLOGY

Scented Glue

You can add some scents to the glue to avoid an offensive smell from glue's hardening. All glues from CMDE KOREA can be added any flavors clients want. In case that something is added to eyelash glue, it can be hardened or the expiration can be shortened. CMDE KOREA produces its own unique scented glue, thanks to our technology not only to keep the existing quality but also to add fragrances to the glue. Experience CMDE KOREA's Scented Eyelash Glue with your favorite scents.

CMDE TECHNOLOGY

Color Glue

We have various types of eyelash glue for different eyelash colors. You can choose a color glue that matches your eyelash color to perform perfect eyelash extensions.

CMDE TECHNOLOGY

PH_Controller

Considering this property, CMDE KOREA developed the controller that raises the pH level of human lash to realize the maximum hardening of eyelash glue. The controller of CMDE KOREA is basically used on human lash, but it's possible to be used on the fake lash if the property of eyelash glues changes. According to your subjective judgement, whenever the setting speed or the adhesion of the glue is not satisfied with you, you can use it. Experience the controller of CMDE KOREA with natural ingredients, which is possible to use it to fake

CMDE TECHNOLOGY

LED Glue(UV/White)

CMDE KOREA produces two types of eyelash adhesives: one that hardens under UV light and another that hardens under white light. All photo-reactive adhesives can be ordered with a choice of viscosity and color, and production is possible by adjusting the appropriate curing time under the lamp. It can also be made for hair use.

CMDE TECHNOLOGY

MMA-free Glue

It is a glue that can be used without worry about carcinogens, as the carcinogenic substance MMA is not detected. As MMA, a component regulated in Korea and several other countries, is not detected, it is a glue that can be distributed and sold without restrictions. Currently, all LED glues sold by CMDE KOREA are MMA-FREE glues.

CMDE TECHNOLOGY

Low-irritation Glue

Due to the nature of adhesives, there may be some irritation to the human body. Some people have sensitive reactions to the gas produced by the chemical reaction of adhesives. In response, CMDE KOREA has developed and is producing glue with minimal irritation.

CMDE TECHNOLOGY

GBL Free Remover for eyelash extension

Professional easily erasable
Eyelash Extension Remover that
doesn't contain GBL.

CMDE TECHNOLOGY

Gel Cream Type Remover for eyelash extension

Professional Gel Cream Remover
made from premium products that
can remove white residue and
help with the clear color. It covers
the disadvantage of Gel Remover
and Cream Remover.

CMDE TECHNOLOGY

Various kind of Type Remover for eyelash extension

Liquid, gel, balm, cream

CMDE TECHNOLOGY

Finisher

Finisher is the product can be applied to finish up the eyelash extension and harden immediately regardless of drying time. The glue never hardens maximally until it becomes dry. The best way to harden the eyelash extension procedure is to have enough time, but you can use CMDE's Finisher in case of having little time to dry the glue or having too much glue on applying. CMDE KOREA's Finisher can make the glue harden without whitening and it's safe to use it directly to the eyelashes. Experience CMDE's safe Finisher after your extension procedure.

CMDE TECHNOLOGY

Primer

Primer is a product used to clean false eyelashes. If there are many foreign substances on false eyelashes, it can reduce the adhesion of glue and false lashes. By thoroughly cleaning the false lashes before application, you can extend the durability and perform eyelash extensions more hygienically.

CMDE TECHNOLOGY

Pre-treatment

this Product that removes protein floating on natural lashes and around the eyes before treatment. Using an alcohol-free product to remove impurities, such as proteins, from the eyelashes and surrounding eye area before treatment enhances the adhesion of the glue. Unlike alcohol-based products that can cause the glue to harden too quickly, weakening its hold, our solution preserves the glue's strength for longer-lasting results. Additionally, alcohol can strip the skin of essential oils and moisture, leaving the eye area sensitive and prone to irritation. By using alcohol-free can prevent discomfort, such as stinging or burning, and provide a safer, more comfortable experience. For this reason, we highly recommend opting for an alcohol-free pre-treatment solution to ensure optimal results.

UVLine

UVglue hardens with blue light

MMA-Free Adhesive

An adhesive that is safe to use,
free from the carcinogenic substance MMA.

Rapid Curing

Enables swift curing within 1-2 seconds.

Customizable Colors

Available for production
in the preferred color of choice.
